

Senior Front End Engineer - Vancouver, BC Full-time

Company Description

Caskadia is recruiting on behalf of a San Francisco based start-up who has just received a large VC Series A funding and is ready to launch an amazing product to revolutionize how HR departments use their talent and will transform the future of work. The company goal is to help large organizations break down silos and create more agile work environments.

Through their platform, they intelligently connect employees to projects and roles where they will have the most impact and personal growth. The result: happier employees, greater productivity and a new world of work.

Job Description

As a Lead Front End Developer, you will get to be at the forefront of building customer facing web and mobile apps that their users will never want to put down. You will work closely with the Director of Engineering and CTO to contribute your ideas to improve the company's software solution and products!

Responsibilities

- Create a beautiful and compelling web front-end
- Design and develop iOS and Android applications from ground up
- Scale and optimize their platform to support users in different parts of the world
- Connect and integrate their product to the hottest 3rd party collaboration and productivity tools

Qualifications

- You're smart, get stuff done, have great energy, and thrive in a start-up environment
- Bad ass at AngularJS, Swift, HTML, Bootstrap, CSS, JavaScript, AJAX and RESTful APIs
- Strong team player and are an innate leader
- Strong understanding and interest in the problem they're solving
- BS in Computer Engineering/Science, related technical field or equivalent practical experience
- 5+ years developing web applications
- 5+ years developing iOS and Android applications
- Excellent communication, including the ability to converse effectively at a technical level
- Strong data, metrics, and analysis skills, and a capability to execute rapidly and efficiently in an unstructured environment

Preferred Qualifications

- Familiar with server side technologies including C#, Java, NodeJs, Oracle, Sql Server
- Experience with testing frameworks such as Karma and Protractor
- Experience developing multi-tenant cloud applications
- Experience with globalization and localization of applications
- Strong understanding of OOD/OOP and design patterns

Additional Information

About the client: The company is venture backed by the most prestigious and successful Venture Capital firms and is on an IPO track to be the market leader in this space. The management of the company have successfully launched, grown and led multi-billion dollar tech companies in the past. This is an opportunity rarely available in Vancouver.
