Front End Engineer - Vancouver, BC Full-time

Company Description
Caskadia is recruiting on behalf of a San Francisco based start-up who has just received a large VC Series A funding and is ready to launch an amazing product to revolutionize how HR departments use their talent and will transform the future of work. The company goal is to help large organizations break down silos and create more agile work environments.

Through their platform, they intelligently connect employees to projects and roles where they will have the most impact and personal growth. The result: happier employees, greater productivity and a new world of work.

Job Description
As a Front End Developer, you will get to be at the forefront of building customer facing web and mobile apps that our users will never want to put down. You will get to apply your knowledge and interests, put your ideas into action, and work closely with the Director of Engineering and other Technical Team Leads to improve RallyTeam's products and hone your technical skills!

<ins>Responsibilities</ins>

- Create a beautiful and compelling web front-end
- Design and develop iOS and Android applications from ground up
- Scale and optimize our platform to support users in different parts of the world
- Connect and integrate Rallyteam to the hottest 3rd party collaboration and productivity tools

Qualifications

- You're smart, get stuff done, have great energy, and would thrive in a start-up environment
- Want to become a Bad ass at AngularJS, Swift, HTML, Bootstrap, CSS, JavaScript, AJAX and RESTful APIs (or your already ARE!)
- Strong team player with a passion for the problem we're solving
- You are either a top of class new graduate with a BS in Computer Science/Engineering, or you have 1+ years developing web applications, iOS and Android
- Excellent communication, including the ability to converse effectively at a technical level
- Strong data, metrics, and analysis skills, and a capability to execute rapidly and efficiently in an unstructured environment

Additional "nice to have" Qualifications

- Familiar with server side technologies including C#, Java, NodeJs, Oracle, Sql Server.
- Experience with testing frameworks such as Karma and Protractor
- Some basic experience developing multi-tenant cloud applications
- Understanding of globalization and localization of applications
- Understanding of OOD/OOP and design patterns.

Additional Information
About the client: The company is venture backed by the most prestigious and successful Venture Capital firms and is on an IPO track to be the market leader in this space. The management of the company have successfully launched, grown and led multi-billion dollar tech companies in the past. This is an opportunity rarely available in Vancouver.
